

Google Assistant and Adafruit

The Details

This system controls the switching on and off an electrical device through a Google Assistant application on mobile phone. Where the system receives certain voice commands that have been prepared in advance to control the on and off the electrical device, or manually controlled via adafruit platform. You must have an [adafruit](#) account as well as an account on the [IFTTT](#) platform. Then all you have to do is just follow the steps in this [site](#) ,

The Schematic

The Code
